

BARTLETT POND

Lyman and Waterboro Twp., York Co.
U.S.G.S. Waterboro, Me. (7.5')

Angler access is restricted to permissive trespass and there is a need to develop public access to this pond.

Fishes

Largemouth bass	White sucker
Yellow perch	Hornpout (bullhead)
Chain pickerel	Pumpkinseed sunfish
Minnows	
Golden shiner	

Physical Characteristics

Area – 30 acres	Temperatures:
	Surface - 81°F
Maximum depth – 18 feet	5 feet - 58°F

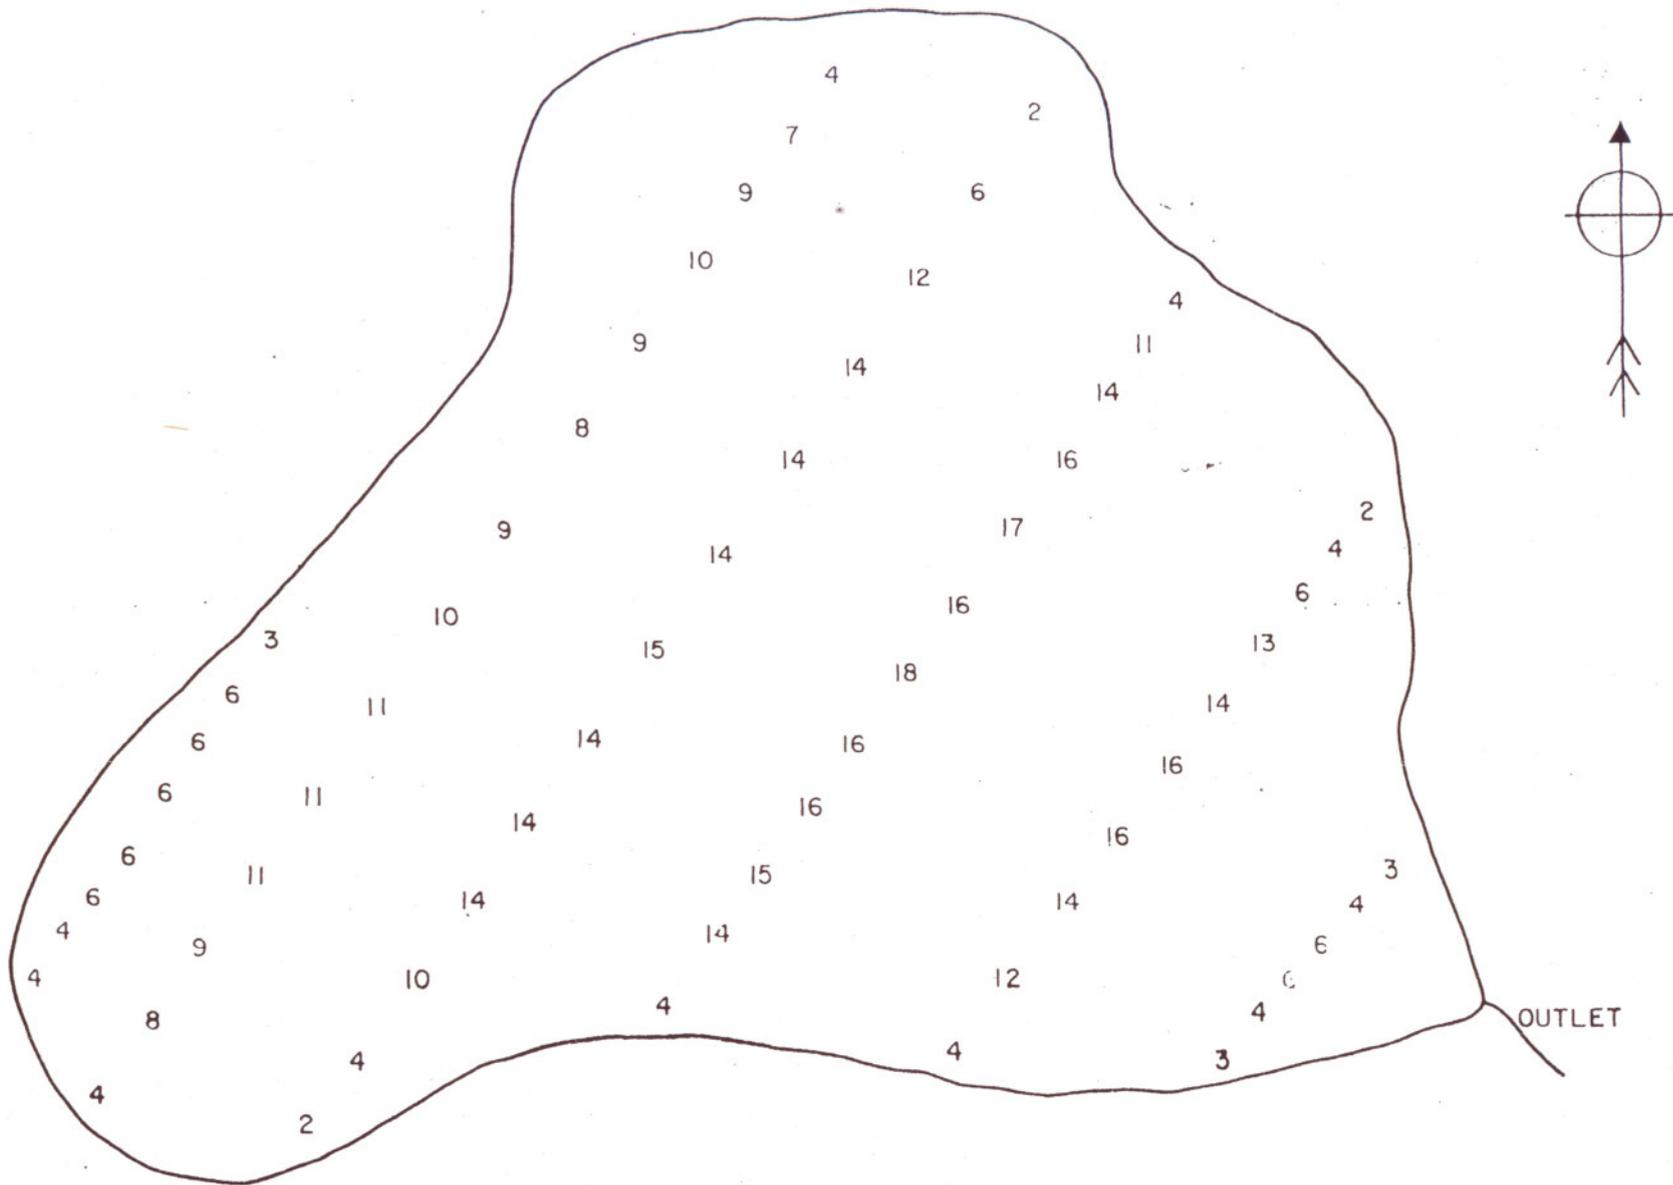

Principal fisheries: Largemouth bass, chain pickerel

Bartlett Pond thermally stratifies during the summer months, but dissolved oxygen levels deteriorate below a weakly formed thermocline. This condition significantly limits opportunities to manage for coldwater fish, and to a much lesser extent warm water fish. The presence of competing and predatory warm water fish further limit opportunities to manage for trout. Bartlett Pond is best managed for warm water fish.

Bartlett Pond was stocked with largemouth bass in 1966. This introduction was authorized by the MDIFW and successfully created a self-sustaining population.

Surveyed – August 1959
(Revised – 1971, and 2003)
Maine Department of Inland Fisheries and Wildlife
Funded in part by the Federal Aid in Restoration Act under
Federal Project F-28-P
